PROJECT STATUS

DUE: 2025-10-06 @ 11:00 UTC

Abstract

Create a midterm report with progress on the semester project. As with the initial proposal, use this opportunity to present to the class, and receive feedback.

1 Project Progress

By this point in the semester, teams should have the core implementation work done. This includes having all supporting software cycling, plus having specific plans (with scheduling) for bringing the project to completion.

1.1 Project Status Document

As in the project proposal, submit a project status update formatted as an academic article. Highlight the progress so far, and discuss an overview of the project status. Include discussion about current work, challenges, schedule and scope changes, and preliminary results.

Additionally, include an appendix with subsections contributed individually by each team member, highlighting their contributions to the project.

Note that the project proposal document may be used as a base for the status update, and subsequently contribute to the final project document.

2 Project Status Presentation

In addition to the written status update, each team must submit a presentation. Create slides that highlight current progress, and preliminary results. Discuss challenges, obstacles, and successes. Give a clear and concise update on the overall progress of the project, and discuss any changes to scheduling and project scope. Seven to ten slides of content is appropriate. Present these slides, creating a video where the contents are discussed, in a format similar to an in class presentation. If the project software status permits, a demonstration of the system should be included. Duration must be shorter than ten minutes.

3 Results

Complete the components discussed in the following sections to receive full credit on this assignment. Refer to Section 4 for submission guidelines, and Section 5 for a summary of the grading rubric. Consider submitting your work as you complete each component, as partial credit is preferred to no credit.

3.1 **10% Feedback**

Each team shall create a post in the discussion forum, where all students can review the progress of each project. This post is not required to be as extensive as the submitted course assignment, but should give a brief overview of the current project status (e.g. a video presentation, and/or short article). Submit the project status presentation for class peers to review, accompanied by a condensed version of the project status document. (i.e., the individual contributions discussed in the appendix do not need to be included.) Approximate size guidelines here are a three page article. All students are encouraged to review the course projects and ask questions, offer suggestions, and give constructive criticism.

NOTE: All students in each group must give feedback to a minimum of two other teams in order to receive full credit for this component.

3.2 **60% Project Status Document**

Project status document

3.3 **30% Project Status Presentation**

Project status presentation.

4 Submission

This assignment is due 2025-10-06 @ 11:00 UTC. *Late submissions are not accepted.* Upload completed assignment components (as individual files, **not** a single ZIP or TAR file) to the course site on Canvas.

Submit work early, as partial credit for incomplete work is preferred to earning a zero for missing work. Submissions may be amended up until the deadline.

5 Grading Rubric

Refer to Table 1 for the grading rubric.
